

AI Mobile Engineer

A great mobile app isn't just about beautiful screens
it's about how smoothly users move between them.

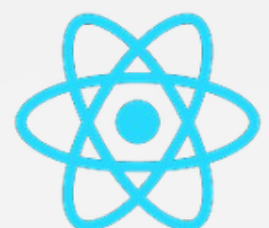

What is Navigation?

- Navigation means moving users from one screen to another.
- Example: Login → Home → Product → Checkout.

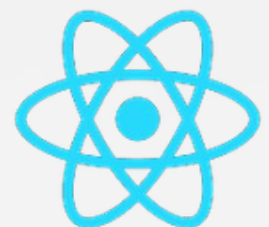

Nested Navigation

- Navigation inside another navigation.
- Example: Main app has Tabs, and one tab contains its own Stack.

Dynamic Navigation

- Routes/screens can change based on dynamic data.
- Example: `/products/101` and `/products/102` show different products.

Types of Navigation

- **Stack Navigation:** Screens are placed one over another.
- **Tab Navigation:** Multiple main sections are accessible through tabs.
- **Drawer Navigation:** Navigation menu slides in from the side.
