

AI Mobile Engineer

AI can generate code in seconds... but companies don't hire people who can copy AI code. They hire engineers who can understand it, improve it, debug it, and build production-ready mobile apps.

What is an AI Mobile Engineer?

- A developer who builds intelligent mobile apps using AI.
- Combines Mobile Development + AI + Backend Engineering.
- Builds production-ready Android & iOS applications.
- Uses AI as a productivity tool, not as a replacement.

What are Cross-Platform Mobile Apps?

- One codebase for both Android and iOS.
- Faster development with lower cost.
- Easier maintenance and updates.
- Used by startups and enterprise companies worldwide.

Why React Native?

Why is it the #1 Cross-Platform Framework?

- Learn once, build for both Android & iOS.
- Backed by Meta (Facebook).
- Huge community and job market.
- Near-native performance.
- Thousands of production-ready libraries.
- Trusted by top companies around the world.

What is Expo?

Why Does the Industry Love It?

- Makes React Native development much easier.
- No complex native setup for most projects.
- Faster development and testing.
- Easy access to device features.
- Simple cloud builds with EAS.
- Perfect for modern production apps.

What You'll Learn in This Course?

- Beginner to Advanced concepts.
- Step-by-step practical learning.
- Industry-standard architecture.
- Modern AI-powered development workflow.
- Production-level tools and technologies.
- Project-based learning approach.
- Build a strong portfolio with real apps.
- Join the AI Mobile App WhatsApp Community.
- Earn The Techzeen Verified Certificate.

How to Get The Techzeen Verified Certificate?

- Join the official WhatsApp Community.
- Complete all assignments.
- Submit every project.
- Follow the instructions shared in the community.
- Stay active throughout the bootcamp.
- Mark your attendance by commenting your name on every lecture.
- Successfully complete the final capstone project.
